

Passion and Trust Fueling the Business of Science

Sheri Governo, MBA, Chief Operating Officer, Exigence Technologies Inc.

Song Liu, Ph.D., Inventor of Exigence Technologies biocide,

*Associate Professor of Polymer Chemistry, Department of Textile Sciences,
University of Manitoba*

Exigence Technologies Inc. is an early stage Canadian corporation formed for express purpose of commercializing the ground-breaking composite biocide technology invented by Dr. Song Liu. Dr. Liu and the Exigence management team of Zach Wolff, Sheri Governo and Javier Nudler, have formed a strong and productive collaboration that has enabled the commercialization process and has given new urgency to Dr. Liu's research. Dr. Liu, Chief Scientist for the corporation, along with Sheri Governo, Chief Operating Officer, will present a brief overview of both the science and the business aspects of the corporation that was recently named Life Science Early Stage Company of the Year by the Life Sciences Association of Manitoba. Dr. Liu will explore the unique and compelling characteristics of his two patent-pending biocide compounds, while Ms. Governo will elaborate on the involvement of the University of Manitoba Technology Transfer Office and multiple considerations that the management team has faced during the commercialization and technology development process. Finally, Song and Sheri will share some of the team factors that have contributed to the success of this science/business collaboration.
