

The Role of NSERC in Fostering Collaboration

Robert Déziel, Québec NSERC Bureau

The Natural Sciences and Engineering Research Council of Canada (NSERC) is the largest funder of science and engineering research in Canada. With funding from the Government of Canada, NSERC supports world-class research of over 41,000 talented students and professors at universities and colleges across the country with an annual budget of \$1.1 billion. NSERC has established a network of regional offices across the country to develop a local presence and facilitate access to NSERC programs. The new mandate for all regional offices is to focus on NSERC's goal to connect and apply the strengths of the academic research system to build prosperity for Canada. Regional offices are building awareness within the private sector, increasing the number of academic-industry partnerships, increasing the participation in NSERC's research partnerships and industrial scholarships programs.
